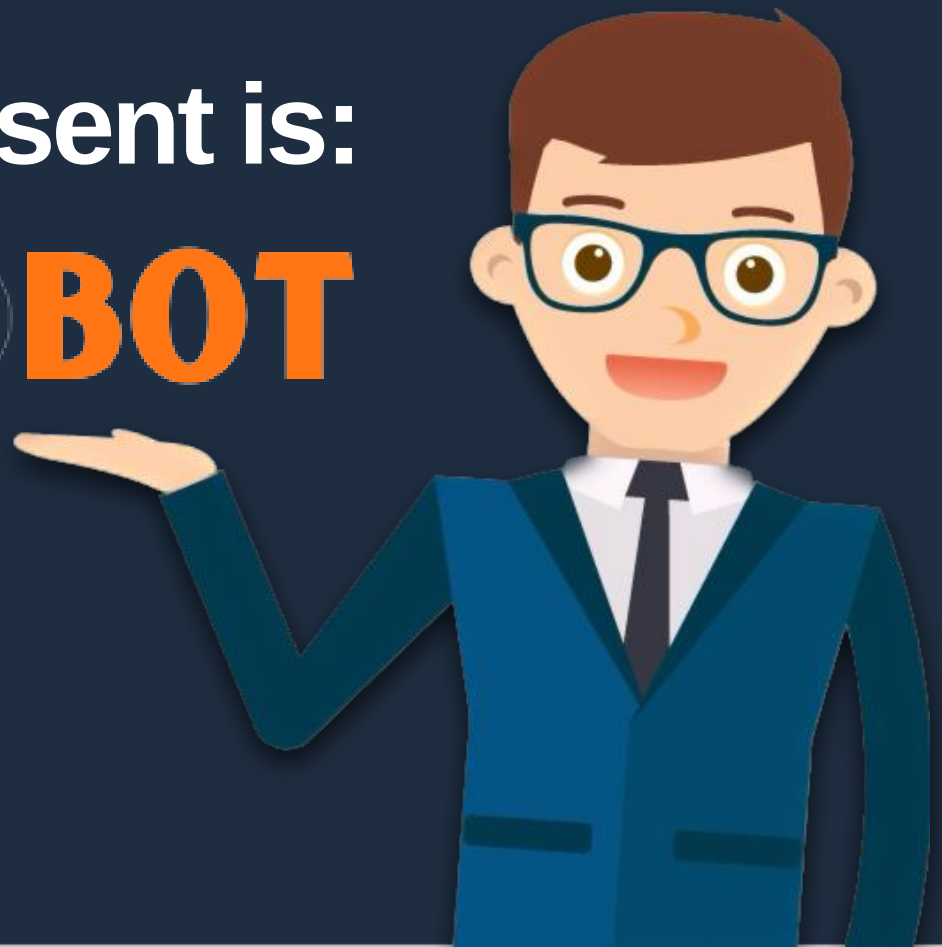
BUSINESS AUTOMATION

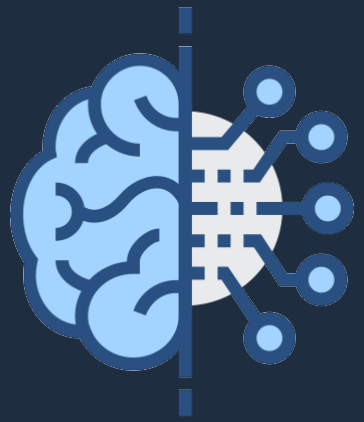
The tool we present is:

appoostoBOT



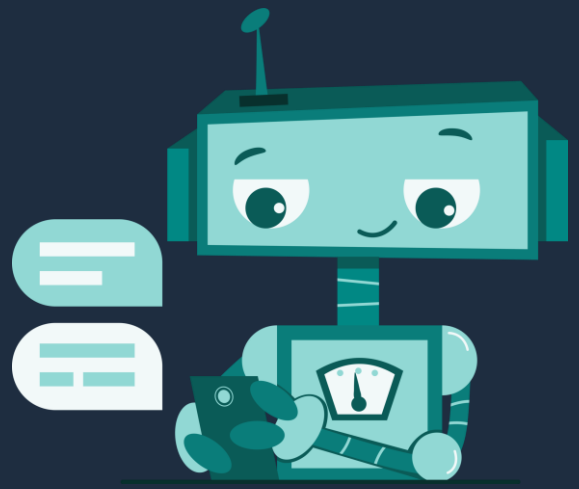
AppooBOT It is an advanced virtual avatar developed by Cocoon Web Tech Srl, based on an open-source AI model.

Its main feature is the ability to be trained with specific company data in order to provide relevant answers and act as a true corporate assistant.



The main goal of AppooBOT is to simplify interactions between the company and its customers or website visitors.

Thanks to its AI, AppooBOT can answer common or specific questions regarding the company, its products or services, sales policies, opening hours, and much more.



It could provides assistance in product selection or resolve basic issues.

Its ability for personalized training allows customs responses based on the specific needs of the company, offering a tailored solution for customer inquiries.

Another distinctive feature of AppooBOT is its integration with thousands of apps through a major partner that manages APIs, an online automation platform that connects various apps and services.

This integration allows linking the details of conversations that occurred with AppooBOT to over 50,000 different apps, including all services within the Appoosto ecosystem.

This means that AppooBOT can interact with other apps and perform a wide range of activities such as bookings, orders, purchases, and accepting payments.

This integration provides a seamless and streamlined user experience, allowing users to perform actions directly from the chat with AppooBOT.

Thanks to personalized training and integration with this API manager, AppooBOT becomes a multifaceted and versatile corporate assistant.

It helps businesses automate a range of daily tasks, reducing manual efforts and enhancing efficiency.

For example, AppooBOT can:

- Manage reservation requests,
- Process orders for products or services,
- Accept payments through integrated payment methods

And much more...

Furthermore, AppooBOT is capable of learning and improving over time through the use of machine learning techniques.

This means that it can adapt to new information and enhance its responses over time, providing an increasingly efficient and personalized service to customers.

In summary, AppooBOT is a virtual avatar based on an open-source artificial intelligence model, trained with specific company data.

Its integration with the MEGA API manager allows linking conversations to other apps and services, enabling AppooBOT to perform a wide range of activities, from handling reservations to accepting payments.

This makes it a COMPLETE and highly CUSTOMIZABLE corporate assistant, capable of simplifying interactions between the company and its customers.
